Last August, the IAU Working Group on Meteor Shower Nomenclature was approved to continue its work under Commission F1 of the International Astronomical Union for the new period 2018 – 2021. This poster will introduce the Working Group and its new members and outline the projected activities in the coming years. In particular, we aim to put procedures in place to remove showers from the working list (move into the List of Removed Showers), put a procedure in place for removing temporary listed showers that are not subsequently described in a paper, add lookup tables to the list of showers that give solar longitude, radiant and speed for those meteors on which the identification was based, support the Meteor Data Center, and continue the work to help with arbitration in the naming of new meteor showers.
