

On citations in meteor astronomy: distribution and maturity time

Ryabova G.O.

We analysed citation history of papers published in the last 20 years in the field of meteor astronomy. The questions we were going to answer are the following.

How process of the citation evolves?

When the citations reach maximum (if it exists)?

Is it possible to define groups of highly cited papers?

The analysis made use of capabilities and tools of NASA's Astrophysics Data System. At the moment the study is not finished yet.
